

TRUE SEQUENTIAL FOOT MARKINGS

- Assures customers that they are getting the exact amount of footage they paid for on each reel. We were the FIRST manufacturer to sequentially mark reels and the ONLY manufacturer to mark every foot on 1/0 and larger.
- Cutting wire becomes easy because each foot is marked. Prevents shortages on jobs eliminating claims, which can be costly to the distributor.
- Ensures the accuracy of the footage when cutting for jobs when a meter is not calibrated. Saves the distributor money.
- If reel is unmarked after cutting, distributor will know footage remaining on reel. All reels reset to 0 footage when manufactured for true sequential footage on each reel.
- Prevents THEFT. If wire is missing from reel, it will alert warehouse manager of problems.
- Helps calibrate the meter for the distributor.
